The video you have just watched is available at our subscriptions page Rounding up the entire review on SnapMirror 2.0, the software has been described with good technical terms and terms that one can apply in everyday life. SnapMirror 2.0, as its name suggests, is an app that allows users to share music and playlists with others over the internet. How SnapMirror 2.0 works The software seems to be well thought-

---

out, and it offers a simple yet intuitive user interface that allows the user to set his preferences. First of all, the "Create New Account" and "Login" tabs will lead to a clean user interface, which consists of the following sections: Artist Information This is where the artists of the tracks one wants to share appear, and along with them, the related tracks. Playlists This is where the playlists of the users appear, and users can add tracks to them and share them with others. Other SnapMirror 2.0

---

also offers the possibility to share the tracks with other apps and platforms, such as Facebook, Spotify and others. After following these instructions, one can have a look at the list of playlists already shared with the user, and also see the tracks in them. How SnapMirror 2.0 works in practice The application starts out on a clean note, with a fast startup and a high search speed. As one can see, the application handles pretty well files with more than 1 GB in size, but it takes time

---

to deal with small files, even though, in such case, one gets the option to install it on his device. As soon as the user plays a playlist, the playback, as expected, takes longer. The user can track the playback to see where it slows down, and the playback of tracks is fast and smooth in any case. The only problem that might occur is when the track changes every few seconds, as this can lead to some pauses in the playback. And, as mentioned before, SnapMirror 2.0 allows sharing the tracks with

---

other platforms as well. Since there are a lot of apps and players that are competing for this industry niche, it is difficult to compare the performance of SnapMirror 2.0 with that of other software apps, since all of them might vary in terms of quality.

Wrap-up It should be mentioned that SnapMirror 2.0 is a simple software solution

KEYMACRO is an easy to use

---

software tool that allows users to create macros by using a customized keyboard shortcut.

**Windows Requirements:** Running Windows Vista, Windows 7, Windows 8 or Windows 10 is required. How to use

**KEYMACRO:** The tool consists of an interface that displays the menu options and the keyboard shortcuts that users can assign to their macros. Users can also select a hot key from a menu to create a macro. Once a user has selected a shortcut, it will be added to a

---

specific category of shortcuts called Quick Access. Using a standard keyboard, users can set a hot key to launch their desired macros, and they can make these shortcuts repeatable. Creating a new macro: Once the user clicks on the shortcut of the macro that he or she wants to create, it will display the first options. These include the options of a hot key (a shortcut to launch the macro), the category of the macro, the action of the macro, and the optional settings for the macro. To set a

---

key combination to execute the macro, it needs to be selected from the list of Hot Keys, and the next window appears. Here, it is possible to set the menu that the hot key will open when it is selected, along with the action of the menu, and the extra options for the menu, such as the keyboard combination. Repeatable macros: **KEYMACRO** supports the repeat option, so that the user can launch the macro once and then set a key combination to repeat it for the time. To set the

---

desired key combination, it is only necessary to select it from the list of repeating keys, and then the next window appears. The user can set how many times he or she wants the macro to be repeated, along with a screen resolution and a text to be displayed on the screen when it is run. To set the menu, users have to do the same thing: it is possible to select the menu from the list of menus, set the menu that it will open, and set the option of the menu, just like it is done in the creation window. To

---

execute the macro, users need to assign a hot key and define a menu. Once the macro is created, it can be run by clicking on the assigned key, and the macro will be launched automatically. When a user clicks on the exit option, KEYMACRO exits. Any other settings can be changed and edited at any time. Pros: KEYMACRO

#### What's New In DiskBench?

Disk Bench is a program for calculating the hard drive performance and letting you know where you stand. It provides five different tests on an internal or external hard drive for read, write, copy, file batch and file copy. It also provides a summary with a single percentage for the five

---

tested operations. The tested hard drive is represented by a small icon in the system tray, with the actual disk performance represented by a rotating arrow. It can be moved to the system tray's right-down corner to close or to the system tray's left-down corner to show the progress in real time. Other system tray icons represent the different partitions on a hard drive and all the programs currently running on a machine. The program can be paused or stopped from running. It can also

---

be configured to open a file or directory and to move a file or directory. Disk Bench can record the test results and provide a summary of the testing results. It includes an option to automatically remove files no longer in use. The program can also be used to automatically find out the hard drive types and their capacities.
